

## CASE STUDY

### Another Zenith playground canopy for a Reception Class

Gail Owens of Arden Primary School in Sparkhill, Birmingham, contacted Zenith for a quotation for an all year round canopy for their Reception playground adjacent to the building so that they could have a covered freeflow area from the classroom to the playground. The school wanted a new covered area so that the children could play outside and be protected from the elements all year round, regardless of the weather.

Ian Manners of Zenith carried out a site survey at Arden Primary and after discussing Gail's requirements, quoted for 1 x 6m x 4m Airone Tipi 150 which fitted perfectly in the area outside the Reception class. Gail and her team liked the design of the Airone Tipi and the fact that it can be used all year round for an outdoor play and learning area.

Subsequently, Gail placed an order for delivery and fitting in the October half term. Gail also arranged for artificial grass to be fitted underneath, through another contractor.

In addition, for extra safety reasons, because of the age of the children, a high impact safety pad was fitted to the outer leg column.

The school are delighted with the canopy and are now looking forward to the children using it all year round.

The Airone Tipi 150 system is available in standard modular sizes from 3m up to 7m but can also be manufactured to bespoke sizes to suit the area. Being modular, it has endless add on capacity. The structure frameworks are manufactured in galvanised steel and powder coated in a choice of colours and the canopies are produced in PVDF coated PVC also available in a variety of colours.
