

CASE STUDY

Covered Walkway and Nonsuch High School for Girls in Sutton

Dave Stewart, one of the Site Managers at Nonsuch High School for Girls in Sutton, Surrey contacted Zenith Canopy Structures to replace an existing wooden canopy that was past its sell by date. In addition to replacing the existing wooden canopy, the school wanted to extend the canopy in an 'L' shape to cover two sides of the quadrangle so that students could move easily between the school buildings in all weathers. After carrying an initial site survey, Ian Manners of Zenith quoted for 1 x 22m Simplicity 35 canopy to replace the existing one. Due to the flexibility of the Simplicity system, it was possible to cover the recesses in the area from a depth of 3.5 metres in some parts to 1.6 metres in others. In addition, Ian quoted for a further 20 metres up to 5 metres in the new uncovered area.

After meetings with the Senior Leadership Team, the school finally placed the order based on the drawings Zenith provided. After the removal of the existing canopy, Zenith carried out the work during the Easter holidays in time for the start of the summer term.

The canopy now allows the students to walk between 3 different buildings under cover.

The Simplicity 35 system has an aluminium frame, powder coated in white as standard but can also be manufactured in a variety of RAL colours. The roof is made of 35mm structured polycarbonate available in clear, opaque or bronze.
