

Case Study

Zenith have worked on several canopy projects with ISG Construction and were asked by their Birmingham office to tender for a canopy walkway at the new Solihull Academy.

ISG were the main contractor for the project which was to redevelop and refurbish a former business centre and turn it into a new Alternative Provision Academy. The Academy required a covered walkway so the students could move between classes in all weathers.

After visiting the site and carrying out several site surveys, Ian Manners and Craig Gilbert produced a drawing and tender price to ISG. It also included a small entrance canopy to the main reception.

ISG accepted the quotation for 1 x 50 metre x 3 metre Simplicity 35 canopy structure to be installed to 2 sides of a quadrangle. The Simplicity 35 has an aluminium frame, powder coated in RAL 9016 Traffic White and has roofing in 35mm structured polycarbonate in opaque.

The 2.66m x 1.5m Entrance Canopy was produced with a powder coated RAL 8019 Grey Brown and roof panels in clear polycarbonate.

The canopies were installed over a two-week period and the whole ISG Project was completed in time for the Academy opening.
